DETAILED ACTION

Claim Objections

1. Claim 1 is objected to for the following informalities: claim 1 recites limitation "protruding sheaft". It is unclear. Appropriate correction is required.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
3. Claim 1 recites the phrase "OF THE TYPE" in line 2 renders the claim(s) indefinite because the claim(s) include(s) elements not actually disclosed (those encompassed by "or the like"), thereby rendering the scope of the claim(s) unascertainable. See MPEP § 2173.05(d).
4. Referring to claims 2 and 3, they are rejected for the same reason as claim 1.

Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. **Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Hsieh (U.S. 5,741,290).**
7. Referring to claims 1 and 2, Hsieh discloses (see Figs. 1, 2, 3B, and 4) an eyebrow tattooing tool comprises a threaded bolt 22 (see Fig. 3B) that can perform shuttle movement by motor 6, wherein the threaded bolt 22 is passed through an opening or orifice of a prolongation or sleeve 1102, 1103 (see Fig. 2) located at the distal end of front casing 11 for coupling to the rear cap 31 and front cap 30; a needle 8, housing 30, and a disk 4. Here it is noted that Hsieh also disclose that rear cap 31 and front cap 30 and locking member 5 are integrally formed into a single piece 3A (see Fig. 4, col. 4, lines 33-55).

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.
9. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

10. **Claim 3 is rejected under 35 U.S.C. 103a*) as being unpatentable over Hsieh (U.S. 5,741,290) and further in view of Chou (U.S. 5,776,158) or Nguyen et al. (U.S. 5,944,700).**

11. Referring to claim 3, Hsieh discloses the invention substantially as claimed except for the ridge. Chou discloses the finger grip portion 14 has ridges (see Fig. 1).

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made by the applicant to use the ridges design, as disclosed by Chou, to incorporate into the locking cap portion, as disclosed by Hsieh because this will improve the gripping of the fingers during removing or assemble of the device. Furthermore, it would have been an obvious matter of design choice to a person of ordinary skill in the art at the time of the invention was made by the applicant to use the ridge design to improve gripping of the fingers since this feature is well know.

12. Still referring to claim 3, Nguyen et al. disclose an insulin needle includes a hub 40, sleeve or skirt 54, ridges, protrusion 42, needle 50 wherein needle 50 is securely fixed to protrusion 42, and sleeve 43 (see Figs. 1 and 2 and col. 3, lines 14-54).
